

Converter

HW for TAC368

Make an app that lets users convert temperature between Fahrenheit and Celsius, and weight between pounds and kilograms.

It should have

- numerals 0-9
- negative sign
- decimal point
- 4 operations,
- display of input and output numbers

After you do a conversion, it should be ready to do another one.

Name your file CalcYourName.dart. For example, mine would be CalcBarrett.java. Submit on BrightSpace, just the .dart file. And/or do GitHub.
